 In 0.1 miles, take the first right onto Navarre Rd SW
 In 0.1 miles, turn left onto Leo Ave SW
 Take Leo Ave SW to the end of the dead end.
 DLH Industries will be on the left.

President's Message

By Brian Sarvas

This year is flying by. We only have two more meetings before our summer break. If you haven't made it to a meeting this year you should really think about our April meeting. We will be touring a very impressive facility and it will be the last joint meeting with the Akron Section. DLH does it all, from concept to final part assembly utilizing multiple process. You won't want to miss this tour.

This has been an interesting year of meetings and the March meeting was no exception. Vadxx Energy presented an innovative process for recycling polymers into petroleum products. This is the second recycling process we have been presented, at our meetings in recent years, that breaks down polymers into their building blocks. Both offer very creative alternatives to simply reworking plastics into new products and eliminate or reduce the need to separate plastics by types.

Our last meeting of the year will be our awards meeting and will highlight the future of our industry. We will be awarding the winners of our essay contest and the Science Fair. You will be able to witness the creativity of the next generation of potential plastics professionals. I look forward to seeing you there.

IMAGINEERING PLASTICS WORKSHOP

It's important to have a partner you can trust

Tuesday, April 26 • Akron, Ohio

Thursday, April 28 • Cincinnati, Ohio

Join us for our one-day, no cost workshop and learn about the latest innovations in compounding: Long Fiber, Bioplastics, TPEs, Color, Wear Resistant, and High Temperature plastics along with part/mold design guidelines and using CAE tools.

Visit www.rtpcompany.com/workshop for details and registration.

On the Move...

Wasilewski Promoted to New Managing Director Position

29-year DME veteran assumes responsibility for day-to-day management

Madison Heights, MI – Bruce Wasilewski, a 29-year veteran of DME Company, has been promoted to Managing Director, a newly created position at the company. The promotion is effective immediately.

In this position, Bruce will be responsible for the day-to-day management of the company, reporting directly to Dave Lawrence, President of DME Mold Technologies. According to Lawrence, “Bruce brings the right combination of business acumen and operations management experience to the position.”

During his 29 year tenure with DME, Bruce has held positions of increasing responsibility in engineering, manufacturing, sales, marketing and general management in North America and across the globe.

Most recently, Bruce has worked with DME’s global operations in both China and India, where he was directly responsible for Asian operations and Global Sourcing. In this capacity, Bruce established key relationships with joint venture and sourcing partners as well as with the company’s global distribution network. He spent his first 20 years with the company in plant management positions.

“Bruce knows the DME business well. His hands-on experience in all facets of the company’s operations will be a tremendous help as we strive to be an essential resource to more and more companies around the world,” Lawrence said.

DME Company is an essential mold technologies resource to customers worldwide. Through aggressive new product development, global product standardization and a powerful combination of in-house manufacturing centers of excellence and strategic global partnerships, DME is helping customers succeed in changing times. The company’s standard-setting, comprehensive product line — including hot runner systems; control systems; mold bases and components; mold making and molding supplies; and cold runner systems for elastomers — is backed by expert technical service every step of the way. DME also manufactures and sells standard tooling for the die-casting industry. Visit www.dme.net for more information.
